

# Practicals With IBM IoT Platform

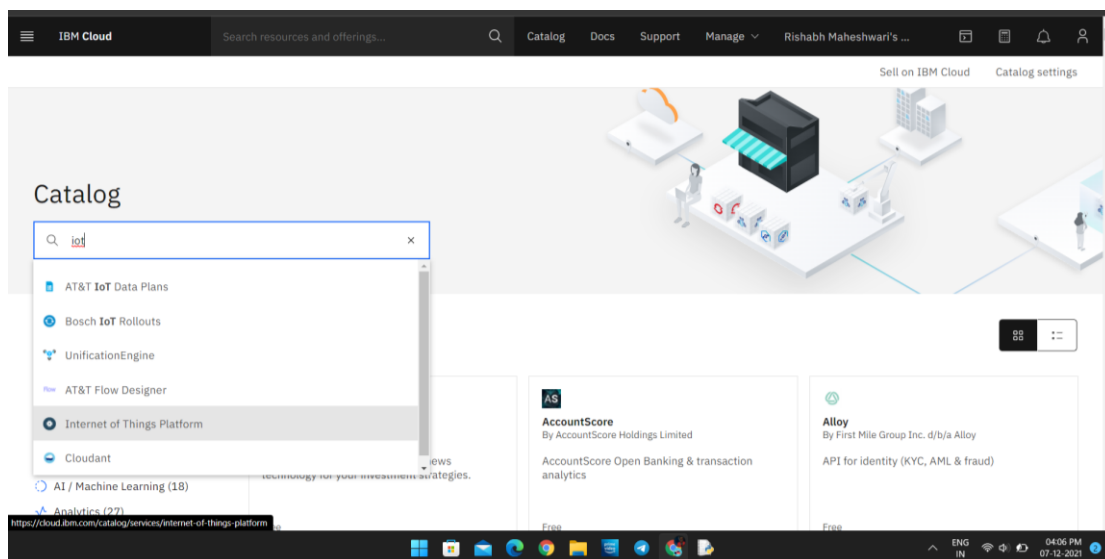

Rishabh Maheshwari

19BCY10145

Create IBM IoT Platform for communicating with IoT devices. Create the devices and Configure the connection security.

Connect the online simulator to the IBM IoT device and visualize the data with internal boards and cards.

To do the above tasks just follow the Screenshots given below on IBM Cloud Services -

IBM Cloud

Device InformationSecuritySummary

There are two options for selecting a device authentication token.

### Auto-generated authentication token (default)

Allow the service to generate an authentication token for you. Tokens are 18 characters and contain a mix of alphanumeric characters and symbols. The token is returned to you at the end of the device registration process.

Authentication Token

Make a note of the generated token. Lost authentication tokens cannot be recovered. Tokens are encrypted before being stored.

Authentication token are encrypted before we store them.

### Self-provided authentication token

Provide your own authentication token for this device. The token must be between 8 and 36 characters and contain a mix of lowercase and uppercase letters, numbers, and symbols, which can include hyphens, underscores, and periods. Do not use repeated characters, dictionary words, user names, or other predefined sequences.
