

Build A Usecase Smart Security For Homes Using IBM Cloud

Rishabh Maheshwari
19BCY10145

Build a use-case Smart Security for Homes using IBM cloud.

The features of the project are:

- capture the image if any person is detected in video streaming using python code
- send the image to IBM cloud object storage
- send the image URL to cloudant DB
- develop a mobile app to display the image and control the doors
- write a python code to receive the commands and control the doors (servo rotation)

1. The python program for Detecting a face, Capturing the Images and Storing them locally on the PC.

```
import cv2
```

```
face_classifier = cv2.CascadeClassifier("haarcascade_frontalface_default.xml")
```

```
eye_classifier = cv2.CascadeClassifier("haarcascade_eye.xml")
```

```
#It will read the first frame/image of the video
```

```
video=cv2.VideoCapture('pexels-cottonbro-8090198')
```

```

while True:
    #capture the first frame
    check,frame=video.read()
    frame = cv2.resize(frame, (1920, 1080))
    gray=cv2.cvtColor(frame, cv2.COLOR_BGR2GRAY)

    #detect the faces from the video using detectMultiScale function
    faces = face_classifier.detectMultiScale(gray,1.3,5)
    eyes = eye_classifier.detectMultiScale(gray,1.3,5)

    print(faces)

    #drawing rectangle boundries for the detected face
    for(x,y,w,h) in faces:
        cv2.rectangle(frame, (x,y), (x+w,y+h), (127,0,255), 2)
        cv2.imshow('Face detection', frame)

    #drawing rectangle boundries for the detected eyes
    for(ex,ey,ew,eh) in eyes:
        cv2.rectangle(frame, (ex,ey), (ex+ew,ey+eh), (127,0,255), 2)
        cv2.imshow('Face detection', frame)

    #waitKey(1)- for every 1 millisecond new frame will be captured
    Key=cv2.waitKey(25)
    if Key==ord('q'):
        #release the camera
        video.release()
        #destroy all windows
        cv2.destroyAllWindows()
        break

```

2. Python program for sending data and files to IBM Cloudant Database.

```
for i in range(10):
    print('Iteration: ', i)

from ibmcloudant.cloudant_v1 import CloudantV1, Document
from ibm_cloud_sdk_core.authenticators import BasicAuthenticator
import random

authenticator = BasicAuthenticator('apikey-v2-16u3cmgpkghbaefdikvpaoh5fwzrmup5f'
                                   'h0ukl19f45-d3e6255eadd870e7e2f0e1')

service = CloudantV1(authenticator=authenticator)

service.set_service_url('https://apikey-v2-16u3cmgpkghbaefdikvpaoh5fwzrmup5f')
response = service.put_database(db='products1', partitioned=True).get_result()
print(response)

'''i = random.randint(0,1000)
products_doc = Document({
    id="small-appliances:1000042"+str(i),
    type="product",
    productid="1000042",
    random = i,
    brand="Salter",
    name="Digital Kitchen Scales",
    description="Slim Colourful Design Electronic Cooking Appliance for Home / Kit
    price=14.99,
    image="assets/img/Opamanghew.jpg"

response = service.post_document(db='products1', document=products_doc).get_result()
print(response)'''

response = service.get_document(
    db='products1',
    doc_id="small-appliances:1000042"
```

```
for i in range(10):
    print('Iteration: ', i)

service = CloudantV1(authenticator=authenticator)

service.set_service_url('https://apikey-v2-16u3cmgpkghbaefdikvpaoh5fwzrmup5f')
response = service.put_database(db='products1', partitioned=True).get_result()
print(response)

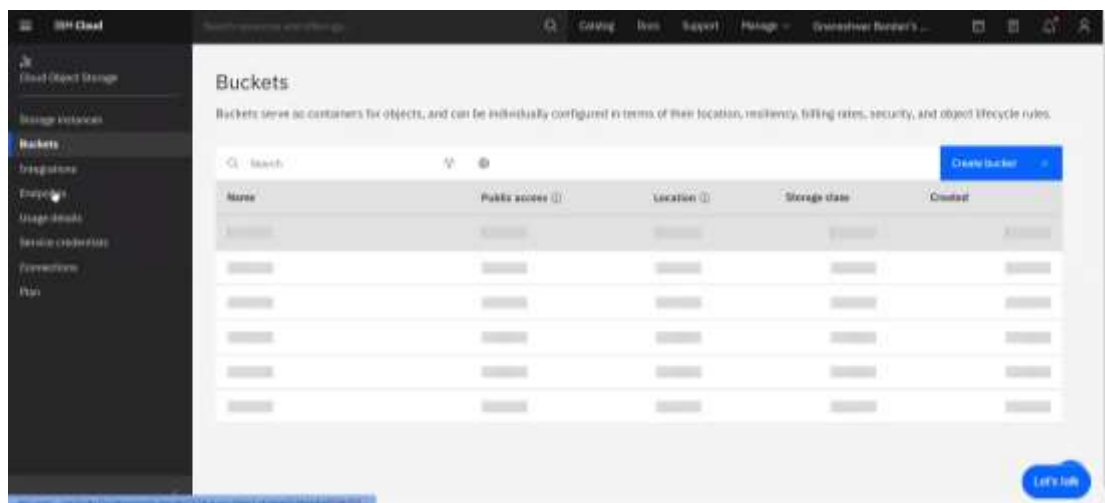

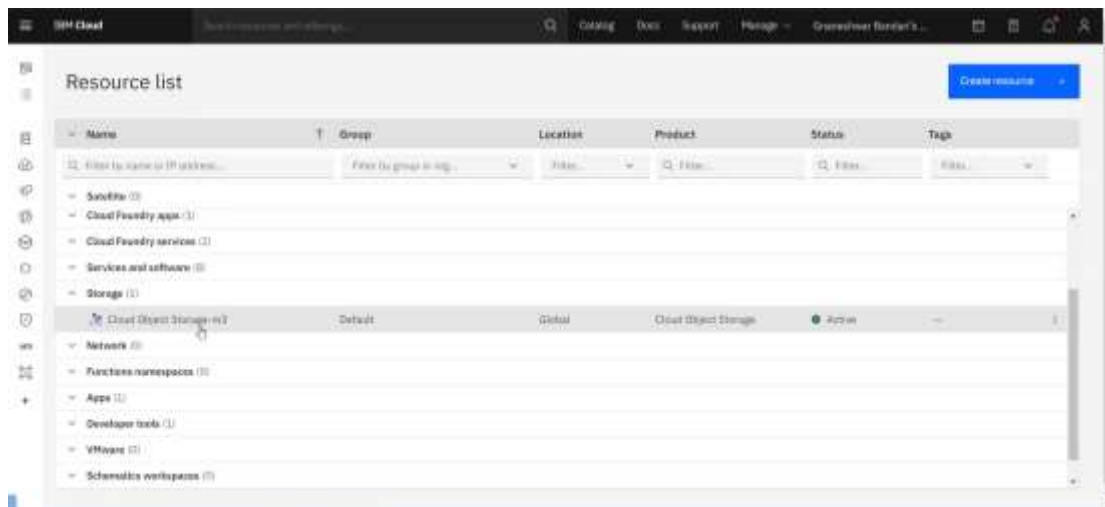

'''i = random.randint(0,1000)
products_doc = Document({
    id="small-appliances:1000042"+str(i),
    type="product",
    productid="1000042",
    random = i,
    brand="Salter",
    name="Digital Kitchen Scales",
    description="Slim Colourful Design Electronic Cooking Appliance for Home / Kit
    price=14.99,
    image="assets/img/Opamanghew.jpg"

response = service.post_document(db='products1', document=products_doc).get_result()
print(response)'''

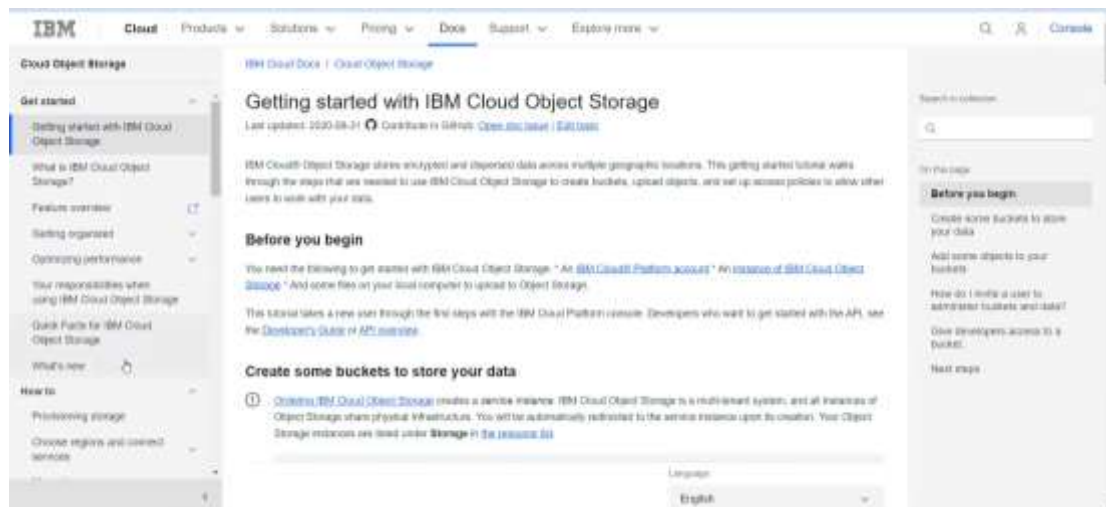

response = service.get_document(
    db='products1',
    doc_id="small-appliances:1000042"
).get_result()

print(response)
```

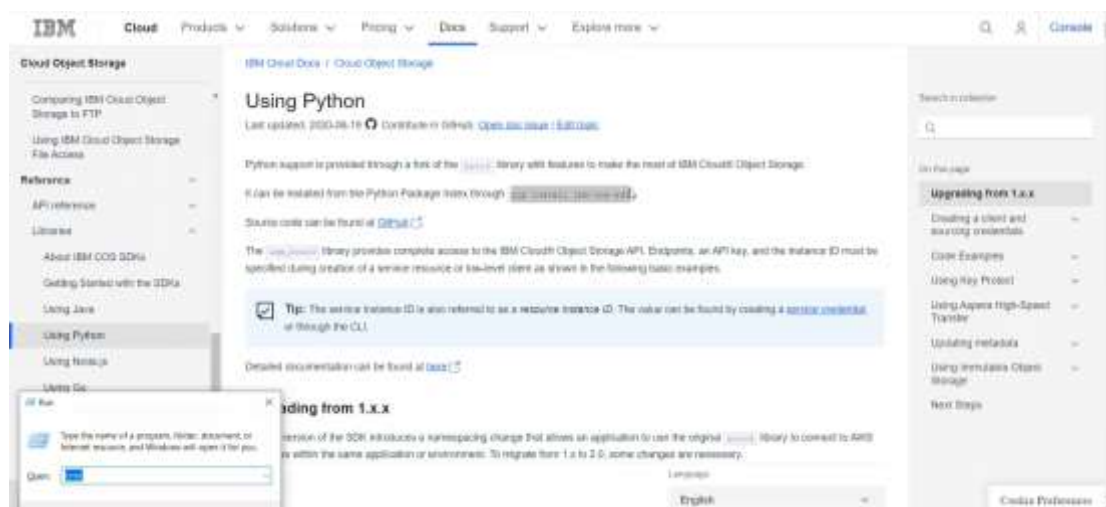

3. Open Cloudant Object Storage Service and go to Buckets.

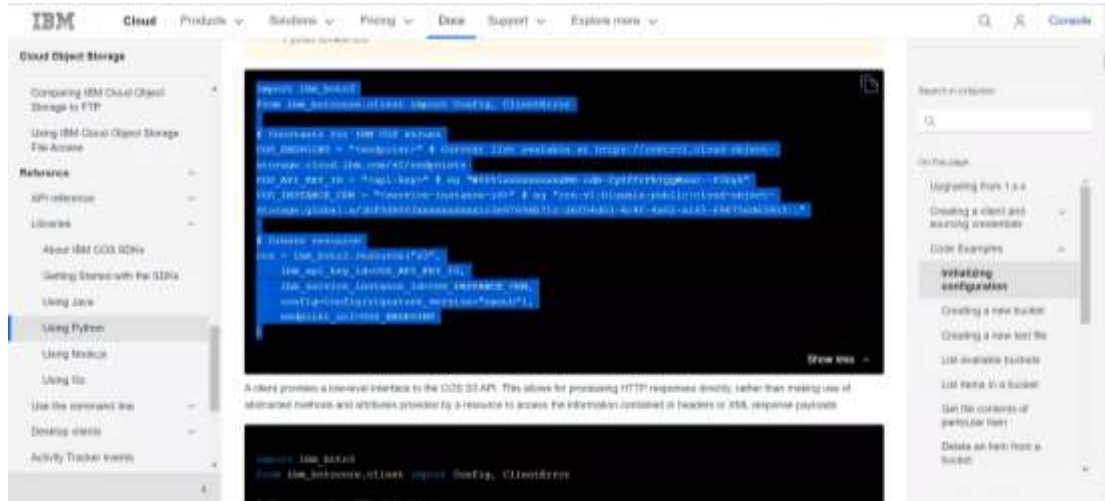

4. Open IBM Cloud Documents. Go to Libraries and open Using Python Docs.

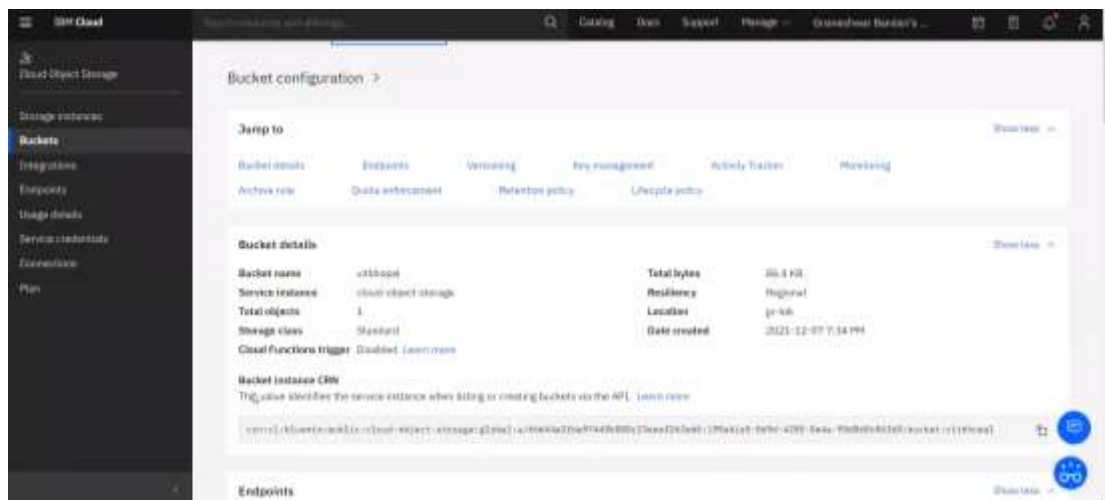

5. Open Command Prompt and install ibm-cos-sdk using pip.

6. Copy the code for Installing Configurations and paste them in a new python file.

7. Go to Buckets and get the bucket Instance CRN (creating buckets using API) and paste them inside the python code.

[illegible][illegible]

10. After the code has been completed run the code and the output would show all Databases stored in the Cloudbant Object Database.

```
Python 3.9.5 (tags/v3.9.5:0a7dcbf, May 3 2021, 17:27:52) [MSC v.1928 64 bit (AMD64)] on win32
Type "help", "copyright", "credits" or "license()" for more information.

===== RESTART: C:\Users\USER\Desktop\cos_test.py =====
Retrieving list of buckets

1
```

11. To run a multi-part upload copy the code and add it to the Python code.

```
import boto3
from boto3.client import Config, ClientError

# Constants for IBM COS values
COS_ENDPOINT = "https://s3.jp-tok.cloud-object-storage.appdomain.cloud" # Current
COS_API_KEY_ID = "[64p-ct18u07090sl7Kp8f7170mmePLJXQ0sgmArh5" # eg "W00Txxxxx"
COS_INSTANCE_CRN = "crn:vl:bluemix:public:cloud-object-storage:global::6b644a3f"

# Create resource
cos = boto3.resource("s3",
    aws_api_key_id=COS_API_KEY_ID,
    aws_service_instance_id=COS_INSTANCE_CRN,
    config=Config(signature_version="s3"),
    endpoint_url=COS_ENDPOINT)

def get_buckets():
    print("Retrieving list of buckets")
    try:
        buckets = cos.buckets.all()
        for bucket in buckets:
            print("Bucket Name: {}".format(bucket.name))
    except ClientError as e:
        print("CLIENT ERROR: {}".format(e))
    except Exception as e:
        print("Unable to retrieve list buckets: {}".format(e))

get_buckets()
```

```

try:
    print("Starting file transfer for {} to bucket: {}".format(item_name,
    # set 5 MB chunks
    part_size = 1024 * 1024 * 5

    # set threshold to 15 MB
    file_threshold = 1024 * 1024 * 15

    # set the transfer threshold and chunk size
    transfer_config = ibm_boto3.s3.transfer.TransferConfig(
        multipart_threshold=file_threshold,
        multipart_chunksize=part_size
    )

    # the upload_fileobj method will automatically execute a multi-part uplo
    # in 5 MB chunks for all files over 15 MB
    with open(file_path, "rb") as file_data:
        cos.Object(bucket_name, item_name).upload_fileobj(
            Fileobj=file_data,
            Config=transfer_config
        )

    print("Transfer for {} Complete!".format(item_name))
except ClientError as be:
    print("CLIENT ERROR: {}".format(be))
except Exception as e:
    print("Unable to complete multi-part upload: {}".format(e))

```

12. The Output will upload a new file to the Database.

```

Starting file transfer for new_upload.png to bucket: vitbhopal

Transfer for new_upload.png Complete!
>>>

```

13. The multi_part_upload must be specified with the database followed by the File name followed by the complete file location on the pc.

```
try:
    print("Starting file transfer for {} to bucket: {}".format(item_name, bucket_name))
    # set 5 MB chunks
    part_size = 1024 * 1024 * 5

    # set threshold to 15 MB
    file_threshold = 1024 * 1024 * 15

    # set the transfer threshold and chunk size
    transfer_config = boto3.s3.transfer.TransferConfig(
        multipart_threshold=file_threshold,
        multipart_chunksize=part_size
    )

    # the upload_fileobj method will automatically execute a multi-part upload
    # in 5 MB chunks for all files over 15 MB
    with open(file_path, "rb") as file_data:
        cos.Object(bucket_name, item_name).upload_fileobj(
            Fileobj=file_data,
            Config=transfer_config
        )

    print("Transfer for {} Complete!\n".format(item_name))
except ClientError as be:
    print("CLIENT ERROR: {}".format(be))
except Exception as e:
    print("Unable to complete multi-part upload: {}".format(e))

multi_part_upload("vithopa", "new_upload.png", "C:/Users/USER/Desktop/new.png")
```

14. The properties of the file in the Database will contain a public accessible URL. Open the URL to access the Image Captured.

15. The control a Servo motor to open a gate on sensing a face you have to make a flow as given below. The output will be as shown.

```
