Build the blocks for receiving data from the IBM cloud and display it in UI. send the commands to IBM Cloud using API's when the buttons are pressed.

1. The flow of the app looks as shown below

2. Since we already have the interface ready so, click on the Blocks icon on the top right of the MIT App Interface. Start adding them as per requirement. Such as **When Web1(clicked) do Set TextBox1.text to(Next task)... and so on.**

3. As per the flow the Block output should be something like this.
